1. How the Economy as a whole works:
Focusing on Productivity, Inflation, and the trade-off between Inflation and unemployment

2. Law of demand
When the Price increases, the Quantity demanded decreases
When the Price decreases, the Quantity demanded increases.

4. Supply and demand Equilibrium Curve
Equilibrium Price: the Price at which the Quantity Consumers want To buy exactly equals the Quantity Producers want to sell.
Equilibrium Quantity: The amount of the good bought and sold at the Equilibrium Price. At this Point, the market is cleared, meaning there is neither a surplus (excess supply) nor a shortage (excess demand)

5. Economies of Scale
Economics of Scale refer to the ~~Cheap~~ Cost advantages that a business obtains due to its Scale of Operation, as the volume of Production increases, the Average Cost Per unit decreases. This happens because fixed costs (like machinery or rent) are spread over a larger number of units, and larger companies can often negotiate better Prices for raw materials.
